Historical residual design
(artifact e342bd4acf39b06b, commit 0ad4e96)
Residual filter: keep histories with no finding from validate_record_with_policy()
A positive policy service deficit always emits a policy finding, so every history with a positive deficit is removed
The 3 policy-specific features are 0 for every retained history
Policy model varies on 6 core features; raw model varies on 6 + 3 features
Structural failure: the comparison cannot test the policy hypothesis
Corrected residual design
(artifact 4feea4508de1bb05, commit 56597d3)
Primary gate: keep histories with no finding from validate_invariant_record() (structural contradictions only)
Policy deficits are not used for filtering, so the 3 policy-specific features can vary
Same invariant-negative histories for every representation and control
Equal fixed additional review budget: 10% of residual test histories, rounded up, for each representation
Policy rules reported separately as a secondary queue
